

CIRSA

DEMYSTIFYING CYBERSECURITY

FOR NON-TECHNICAL PERSONNEL

HOW TO PROTECT YOUR ORGANIZATION WITHOUT A HIGH-TECH BUDGET

In this half-day seminar, we will explain what basic cybersecurity precautions are essential in 2022 and beyond. We will show how CIRSA Members can implement, train, and manage these processes without breaking the bank, and using existing management skills they already possess for dealing with other HR, Legal and Administrative requirements. Hands-on exercises that illustrate the need for an Incident Response Plan, and how to create one, will be provided. Step-by-step demonstrations of common security tools and precautions will be shown. Join us to better understand the cybersecurity basics you need to protect your organization and sleep better at night.

PRESENTED BY

JIM KILMER

Partner & Division Director - OPAL Group

Jim Kilmer brings 27 years of experience in Software Engineering and IT Security to improve business processes and data security awareness in small-to-medium enterprises. His focus is on educating non-technical managers and staff on the need for creating a data security culture within their organization, and running a "Geek to English" translation service for stakeholders struggling to understand the complexities of modern information security. He leads a team of software developers and IT specialists serving a client base spanning three continents for various industries, including Manufacturing, Insurance, Risk Management and Financial Services.
