KnowBe4 FOR CIRSA MEMBERS

KnowBe4 is the world's largest integrated platform for cyber security awareness training.

KnowBe4 offers simulated phishing attacks which can be used to test and educate employees on how to avoid ransomware, spam, phishing, and malware. The platform also teaches employees how to identify suspicious emails and provides access to KnowBe4's vast library of training resources and information on key security topics. This knowledge can be applied in day-to-day operations to proactively prevent social engineering fraud and costly claims to your entity.

Due to increased cybersecurity risks and the expense of ransomware attacks, any entity employee with access to email or the internet is encouraged to participate. To begin using KnowBe4, contact CIRSA to request access. CIRSA and KnowBe4 will work directly with you to create an account. Once your account is set up, you can begin sending fully-automated tests to your employees using thousands of free templates and gain access to the KnowBe4 training library. CIRSA will have access to review your KnowBe4 account and assist with your training needs. Any additional services beyond Diamond Level will be the sole responsibility of the member.

CIRSA offers KnowBe4's Diamond Level access at no cost to member on an annual basis. All CIRSA members are eligible to participate.

For more information and to register, please contact David Beacham, IT Manager.
